

Press Release

Compass Software Appoints 2. Executive Director

Dortmund June 01, 2022 – Compass Software, one of the leading specialists for CAD/CAM stair building software and CAM/CNC timber solutions, has appointed a second executive director.

Compass Software is celebrating its 30-year anniversary in 2022 and is taking this occasion as a chance for a generational change at the company. Next to the current CEO Detlef Hollinderbaeumer, the company has appointed Lukas Hollinderbaeumer as a second executive director.

In the past, Lukas Hollinderbaeumer established an additional business area at Compass Software: PROKON, the software for production management and control, was developed in large parts by him. Furthermore, he established Compass Software's second company location in Bad Endorf (Bavaria) to ensure even greater service for the company's South German and Austrian customers. Creating a sustainable and environmentally friendly business is especially important to Lukas Hollinderbaeumer and he has already proven his commitment with the renovation of the headquarter in Dortmund, which made the office building more environmentally sustainable and accessible.

Lukas Hollinderbaeumer has already gained extensive experience as Compass Software's head of project management and as a member of the extended executive management team. Now, he is looking forward to growing even more together with his employees.

After 30 years of Compass Software, the two CEOs will further encourage generational change and want to ensure an optimal transfer of knowledge. Only through the active transfer of know-how it will be possible to ensure the high quality of Compass Software's solutions and the satisfaction of their customers. Through this step, the software company enters a new chapter in the company history.

About Compass Software

Compass Software GmbH develops software for timber and stair building, offers CNC connections to all customary machinery, as well as develops modern MES solutions for production of any size. The German company is one of the worldwide leading companies in the industry and offers complete solutions from planning, design, and three-dimensional visualisations of stairs to the control of CNC-supported, nearly fully automatic, manufacturing. Furthermore, the company is known for their sophisticated CAM/CNC timber software. For more than 30 years, the company has been delivering innovative solutions to customers in more than 30 countries – from small wood shops to industrial manufacturers.
